

- 1 Introduction
- 2 Setup
- 3 Create a Generic pass class
- 4 Open the project in Android Studio
- 5 Create the Add to Google Wallet button
- 6 Check if the Google Wallet API is available
- 7 Create a Generic pass object
- 8 Add the pass to Google Wallet
- 9 Handle the savePassesJwt result
- 10 Congratulations

## 10. Congratulations

Congratulations, you have successfully integrated the Google Wallet API on Android!

### Learn more

Take a look at the complete integration in the [google-pay/wallet-android-codelab](#) GitHub repository.

### Create passes and request production access

Zurücksetzen

To issue your own passes in production, go to the [Google Pay & Wallet Console](#) to request production access and authorize your Android app.

See the [Android SDK Prerequisites](#) to learn more.
